Reputation penalty - study 2

Jacob Ausubel, Annika Davies, and Ethan Porter

2025-08-28

Study 2

Note that we ran two waves for Study 2. We're publicly sharing a dataset in which the two wave datasets have already been merged together and personally identifying information has been removed.

List of variables

Main variables

Factual belief 1: Belief that abortion pills are dangerous and that 1 in 5 women will suffer a complication (1-to-4 scale)

Factual belief 2: Belief that more contraception availability increases abortion demand (1-to-4 scale)

Factual belief 3: Belief that if a 10-year-old became pregnant as a result of rape and terminated the pregnancy because it was threatening her life, then that's not an abortion (1-to-4 scale)

Various feeling thermometers (0-to-100 scale)

Abortion laws measure (1-to-4 scale)

Abortion penalties measure (0-to-4 scale)

Some control variables

Partisanship: 1 (Strong Democrat) to 7 (Strong Republican) scale

Male: 1 = Yes, 0 = No

College graduate: 1 = Yes, 0 = No

High household income: 1 = household income of \$100,000+, 0 = below that

Age: 18+

Religiously affiliated: 1 = Yes, 0 = No

Attends religious services at least once a month: 1 = Yes, 0 = No

Non-Hispanic White: 1 = Yes, 0 = No

Factual belief models

Main models

Table 1: Effect of fact-check on the belief that abortion pills are dangerous and that 1 in 5 women will suffer a complication (1-to-4 scale)

	Model 1
Intercept	1.27 (0.16)***
Control	$-0.57 (0.07)^{***}$
Fact-check	$-0.90 (0.08)^{***}$
\mathbb{R}^2	0.50
$Adj. R^2$	0.49
Num. obs.	576
RMSE	0.72

 $^{^{***}}p < 0.001; \ ^{**}p < 0.01; \ ^*p < 0.05$

Table 2: Effect of fact-check on the belief that more contraception availability increases abortion demand (1-to-4 scale)

	Model 1
Intercept	0.98 (0.14)***
Control	-0.14(0.07)
Fact-check	$-0.23 (0.07)^{**}$
\mathbb{R}^2	0.28
$Adj. R^2$	0.27
Num. obs.	581
RMSE	0.68

^{***}p < 0.001; **p < 0.01; *p < 0.05

Table 3: Effect of fact-check on the belief about the pregnant 10-year-old (1-to-4 scale)

Model 1
0.98 (0.18)***
-0.03(0.10)
$-0.28 (0.09)^{**}$
0.32
0.30
589
0.94

 $^{^{***}}p < 0.001; \ ^{**}p < 0.01; \ ^*p < 0.05$

Does receptivity to fact-checks (that is, the correction - misinformation contrast) differ by Party ID?

Table 4: Effect of fact-check on the belief that abortion pills are dangerous and that 1 in 5 women will suffer a complication (1-to-4 scale)
